

Greetings citizens, parents and carers,

There is an intriguing start to this new term; Brainiac has infiltrated Class 4's computers and it will take super human expertise to minimise the damage he can do. A call is going out to all the super heroes out there; help Class 4, before it's too late! What super powers will you have, what will your costume look like and what will be your origin story? We will be looking into what makes up our super human bodies and how we can use special abilities to fight crime, keep healthy and save cats from trees.

If we can restore order to the computers in the classroom, we will be continuing to hone our skills in 'Excel' as well as beginning to write our own algorithms using 'Scratch'.

In literacy we will be taking inspiration from many different graphic novels and comics. Creating comic strips of events and stories, using extraordinary and explosive vocabulary, getting to grips with the grammar required to make up a sentence and working out how to proofread our work to make it even better.

Our maths focus is all things fractions and decimals. Knowing how to spot an equivalent fraction, being able to simplify fractions, comparing, ordering and doing calculations with decimals and fractions. Knowing what tenths and hundredths are, looking at the lowest common denominators and making sure our fractions are not improper!

In P.E. we are covering health related fitness, circuit training and developing our running, jumping and throwing skills. In the hall we will be exploring dance, relating to our theme.

In R.E. we will be studying the five pillars of Islam.

Hope you have a super New Year, be vigilant and report anything unusual to your nearest Super Hero.

From Kerry Woods, Bev Burrows and Jo Henman.
